BACKGROUND

The city has been involved in the Local Agenda 21 from 1998, which has led to the subsequent implementation of energy efficiency, emission reduction and adaptation plans. All in the field of actions against climate change. The STEEP (UE-FP7) project, aligned with previous municipal plans (SEAP – Covenant of Mayors 2008, Sustainable Mobility Plan 2004-2024, Energy Plan 2030, etc.

Now, Klima Estrategia DSS 2050 is the new plan which is under elaboration.

This plan comprises the actions of the plans beforementioned.

Every year, the carbon emissions of the city and the municipality are calculated.

A local policy on energy efficiency on the construction and refurbishment was approved in 2009.

We also have expertise in evaluation of the energy savings, as a result of this local policy.

COLLABORATION

We would like to exchange experiences in the field of decarbonisation and more precisely on the implementation of policies regarding energy efficiency and construction or refurbishment of buildings. (commercial and residential)

We would like to learn and exchange experience about green and environmental urban development. It is a key issue for the city of San Sebastian how to face 21st century challenges as climate change or zero carbon economy.

We are particularly interested in the implementation of energy passive buildings and in the urban and building regeneration from the scope of energy efficiency.

We would like to know about what kind of legislation and planning are developing in Hiroasaki to analyze if it would be possible to implement in our city.

We also think that to face these challenges funding is a key issue and we would like to know about the approach in financial tools and politics to carry out them.
